Yorkshire Water Bathing Waters Ilkley STW Integrated Constructed Wetland

What is a Bathing Water?

- A bathing water is defined as: a surface water area where many people are expected to bathe. They must meet quite strict criteria relating to access, amenities and signage informing the public about the bathing water.
- We now have 21 bathing sites in Yorkshire, 3 inland riverine and 18 coastal.
- These are monitored by the Environment Agency for water quality with periodic sampling from May to September each year.

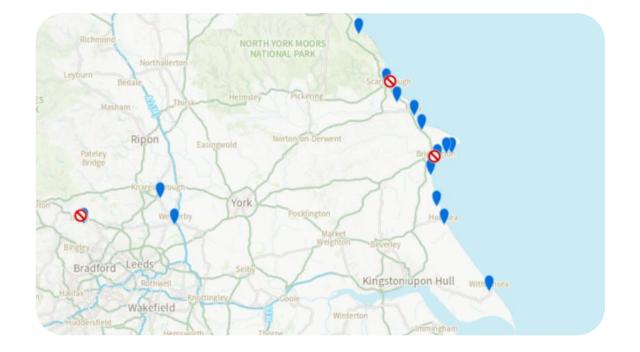

Current location of Yorkshire Bathing Waters

Locations and sample data can be found at the Swimfo website

Shock at bathing spot pollution

How they are managed by Yorkshire Water.

- 4 Bathing Water Managers in role each with specific focuses to be more targeted.
- 2 ways of understanding how we work.
- Monitoring current performance and working with operations to address any issues.
- Informing and driving strategic investments for long term improvements in performance.

Partners

- Partnership working is essential for improving bathing waters.
- Need a collaborative and joined up approach to make lasting difference in the area, whilst we have a big part to play, it is not just water companies that have an impact on designated bathing waters.

Ilkley WasteWater Treatment Works

An integrated solution has been developed to meet the Bathing Water and Environment Act drivers within the Ilkley drainage catchment (BW_IMP1, BW_IMP4 and EnvAct_IMP3). An increase in FFT is proposed at Ilkley STW to enable stored flows within the upstream catchment to drain down and return to treatment as soon as reasonably practicable. All flows entering the increased FFT process will be screened and primary settled. Flows up to existing FFT will remain through the conventional process. A continual base flow, plus flows from 114 I/s to 300 I/s will enter the aerated rushbed for secondary treatment.

The scheme is onsite commencing enabling works and is scheduled to complete by 31/03/26.

What can you do?

• Bin it, don't block it. Remember the 3 P's. Pee, Poor and Paper.

• Surface Water Separation, primarily for new developments.

• SUDs (Sustainable Urban Drainage Solutions) – water butts, planter beds, avoiding tarmacking.

Misconnections.

Encourage others!
